Chartis, a comprehensive healthcare advisory firm, has formed a strategic alliance with DataGen to complete health equity impact assessments as required by the New York State Department of Health. DataGen offers analytical insights to healthcare organizations focusing on payment policy changes, value-based programs, and market dynamics.

This collaboration with DataGen, a subsidiary of the Healthcare Association of New York State, will support Chartis' data analytics capabilities for the State's Health Equity Impact Assessment (HEIA) requirement for Certificate of Need (CON) work to be completed. DataGen has experience with collecting and analyzing data from healthcare providers across the state and is skilled at working with the required datasets to fulfill the analytic sections of the HEIA.

"This alliance strengthens our ability to deliver best-in-class qualitative and quantitative insights to understand health equity impact on vulnerable populations," said Duane Reynolds, Chartis Chief Health Equity Officer and President of the Chartis Center for Health Equity & Belonging. "As Chartis continues to support healthcare organizations with their HEIA requirements, working closely with DataGen enables us to leverage their expertise in data analytics and ours in health equity and healthcare operations."

"This collaboration is a resource for hospitals in New York," said Al Campanella, President of DataGen. "Chartis' reputation as a leading provider of health equity and belonging consulting services, combined with our capabilities in quantitative data and analytics insights, will help New York's health providers harness comprehensive demographic and market data to remain compliant with state legislation."

About DataGen

DataGen offers analytical insights to healthcare organizations, focusing on payment policy changes, value-based programs and market dynamics. Its product portfolio includes impact reports that address annual and ad hoc changes to Medicare's fee-for-service programs, performance measures within Medicare's innovation and value-based programs, custom analytics to evaluate financial and quality outcomes within any payer scenario and applications to track legislative changes and support culture of safety and community outreach programs. DataGen's customers rely on its analytical expertise as they strive to improve quality, outcomes and financial performance. For more information, follow DataGen on LinkedIn or visit datagen.info.
